ANIRUDH RAJA

San Francisco Bay Area | rudyraja04@gmail.com | linkedin.com/in/anirudh-raja

EDUCATION

University of California, Santa Cruz *June 2026*
B.S. Applied Mathematics, Dean's Honors List (2024–2026) *Santa Cruz, CA*
Relevant coursework: Machine Learning, Statistical Inference, Numerical Analysis, Optimization, Probability Theory

Boston University *Fall 2026 – Present*
Online M.S. Computer Science and Artificial Intelligence *Boston, MA*

EXPERIENCE

Accenture *Oct 2026 – Present*
Technology Analyst (AI) *San Francisco, CA*

Informatica (acquired by Salesforce) *June 2025 – Aug 2025*
Artificial Intelligence and Data Science Intern *California*

- Developed causal inference and regression models using EconML to improve customer targeting accuracy by 30%.
- Built automated log-analysis pipelines with OpenSearch to detect system failures, reducing debugging time by 80%.
- Designed modular AI reasoning components that integrate Azure OpenAI into Informatica's Digital Experience platform.

DigitalXC *June 2021 – Aug 2021*
DevOps and Automation Intern *Remote*

- Built CI/CD pipelines using AWS, Docker, and Kubernetes to automate microservice deployment.
- Optimized containerized microservice deployments to improve scalability and reliability.

PROJECTS

RAG Compliance Research Assistant *Python, Claude API*

- Built a retrieval-augmented generation system that answers compliance questions from source documents using embeddings and semantic search.
- Debugged retrieval quality by examining how documents were chunked and which passages were returned for each query.

Energy-Efficient Drone Routing *Applied Mathematics Paper*

- Studied routing for drones surveying flexible regions, with a focus on reducing energy use.

Epidemic Modeling with MEDIDA *Group Project, Python*

- Applied a sparse Bayesian framework (MEDIDA) to SIR and SEIR epidemic models using COVID-19 data and presented the results.

Financial Market Forecasting *R*

- Built time-series forecasting models to predict asset price trends and volatility.
- Ran statistical analysis on historical financial data to identify risk patterns.

Smart Stop Sign System *Python, Arduino, Google Maps API*

- Built an embedded system that detects approaching vehicles with motion sensors and triggers adaptive LED signals to improve nighttime intersection safety.
- Integrated GPS and mapping APIs to trigger safety alerts dynamically.

SKILLS

Languages: Python, Java, C/C++, R
AI and ML: LLMs, RAG, Agentic Systems, LangChain, OpenAI API, Azure OpenAI, EconML, Causal Inference, NumPy, pandas
Cloud and Infrastructure: AWS, Docker, Kubernetes, REST APIs, Microservices, Linux
Tools: Git, OpenSearch, Jupyter

CERTIFICATIONS

AWS Certified Cloud Practitioner | Stanford Machine Learning (Andrew Ng) | Google Generative AI Foundations
